PRAKASAM COTTON

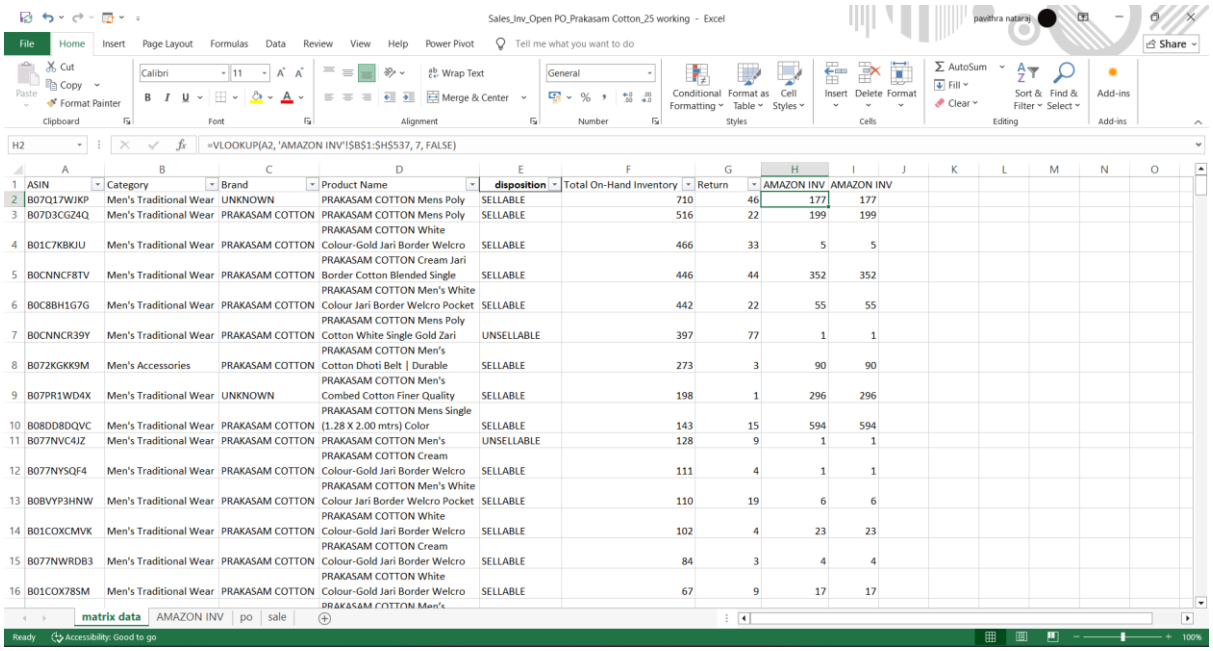

Objective

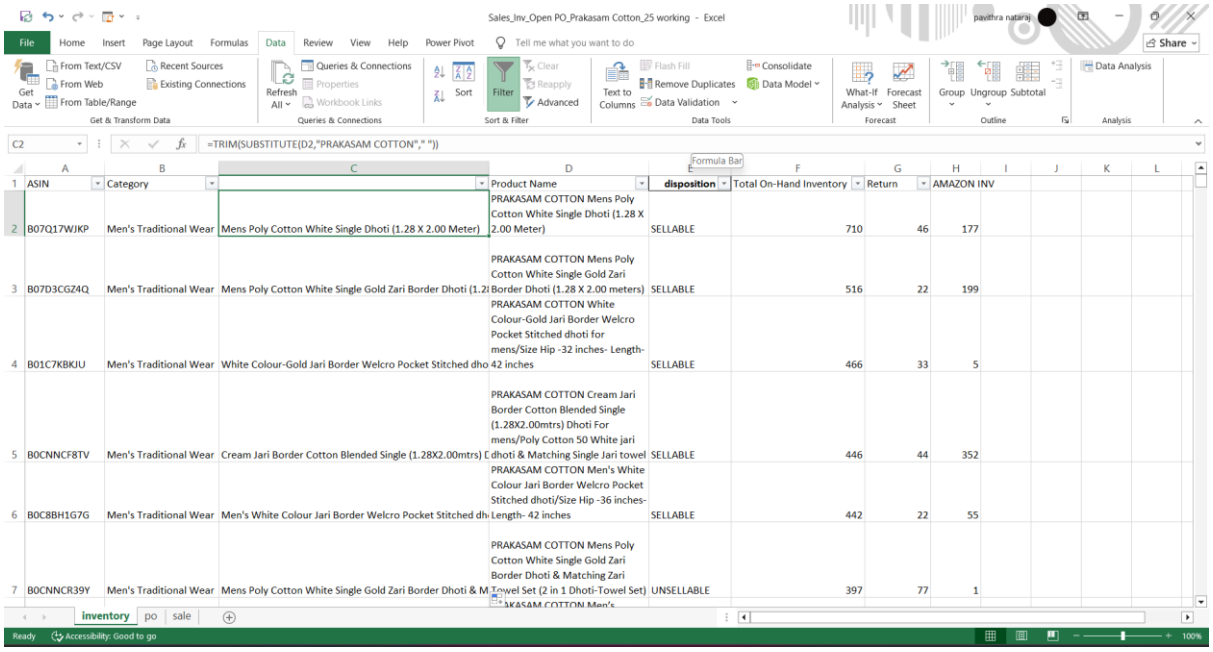

The main objective of this project is to analyse inventory, sales, Amazon returns, and purchase order data of Prakasam Cotton.

- To compare sales performance between Amazon and the own website.
- To identify inventory availability, sellable, and unsellable stock.
- To analyse purchase orders and understand stock requirements.
- To improve inventory management, increase sales, and reduce overstocking through data-driven decisions.

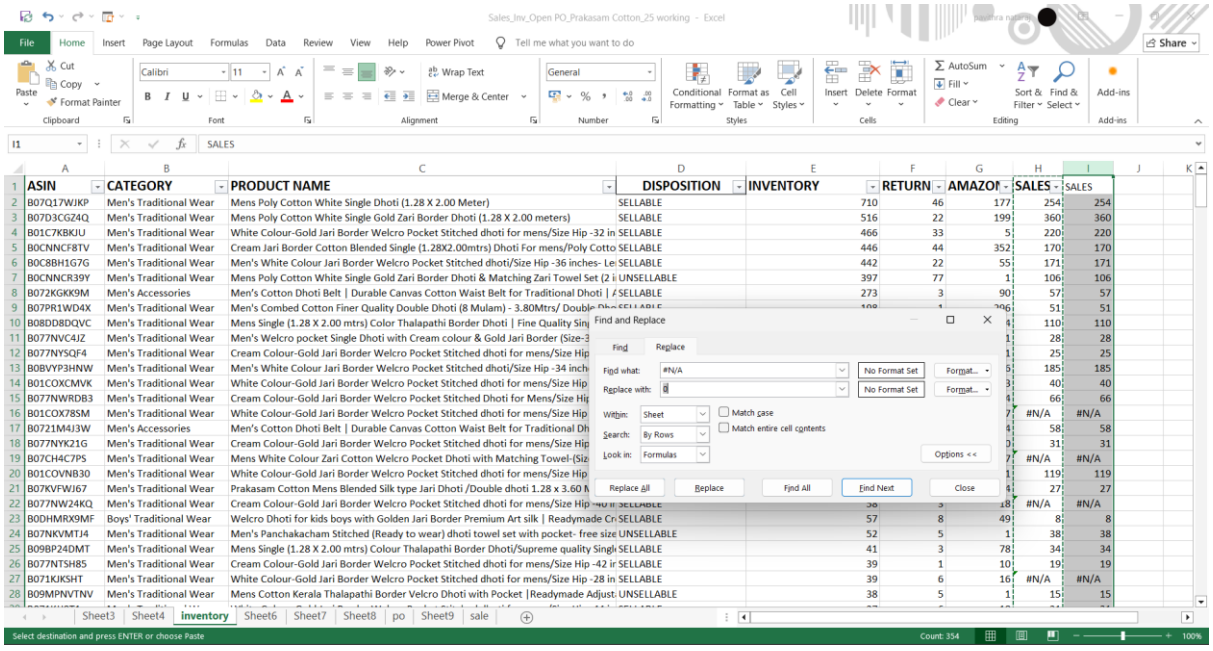

Data Cleaning and Transformation

- Initially, there were 5 different datasets.
- Converted the 5 datasets into 2 main datasets.
- Selected and separated only the required data.
- Used VLOOKUP formulas and Paste Special in Excel to transfer the required data into specific sheets.
- Included 3 screenshots below to show the data cleaning and transformation process.

Pivot Table Created for Data Analysis

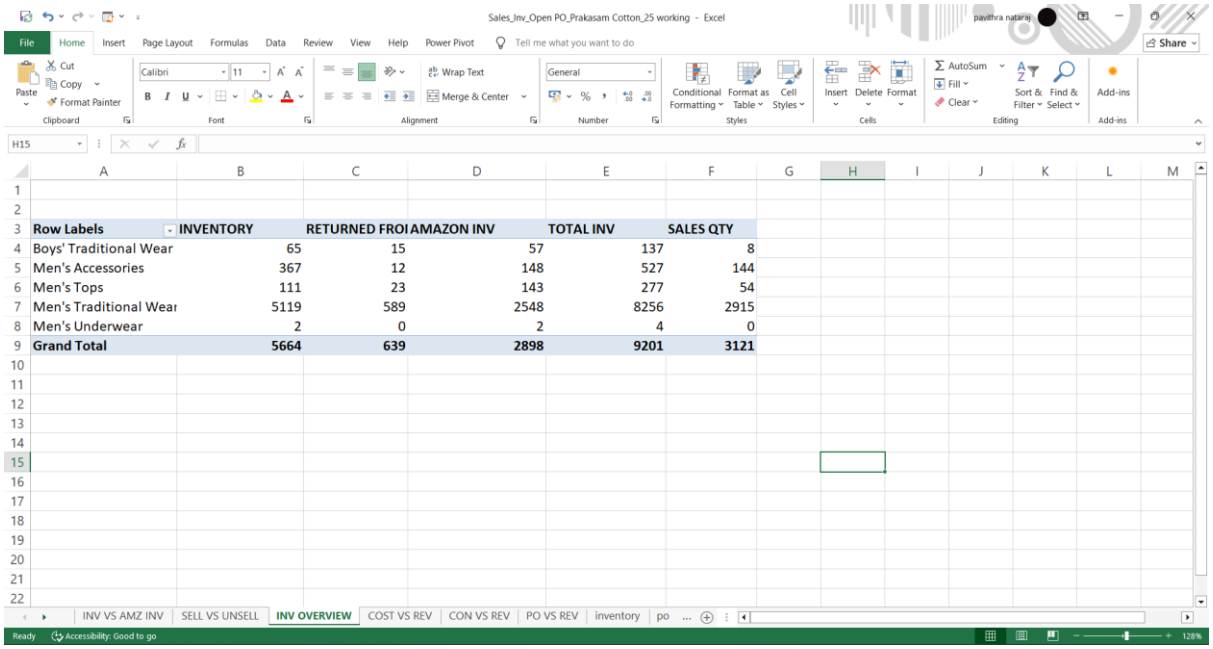

- Created Pivot Tables using two different sheets in Excel to analyse the data.
- Created 6 Pivot Tables for Inventory, Sales, Purchase Orders, Returned Products, Sellable and Unsellable Stock analysis.
- Used these Pivot Tables to summarize and compare the required data.
- Attached screenshots of each Pivot Table below for reference.

Power BI Dashboard Creation

- Imported the cleaned Excel data into Power BI and created relationships between the datasets.
- Created an interactive dashboard to analyse Inventory, Sales, Purchase Orders, Amazon Returns, Sellable and Unsellable Stock.
- Problem Identified: Excess inventory, low sales, and difficulties in tracking Amazon inventory.
- Suggested Solution: Maintain production stock based on twice the previous month's sales and increase own website sales through marketing.
- These problems and suggested solutions are explained through dashboard visualizations.
- Attached dashboard screenshots below for reference.

Inventory, Sales and Purchase Order Analysis – Prakasam Cotton

- Analysed inventory and sales quantities across different product categories.
- Compared company stock, Amazon stock, and Amazon returns.
- Identified sellable and unsellable inventory.
- Compared confirmed, reversed, and final Purchase Order (PO) quantities.
- Identified products with high inventory but low sales.
- Analysed the impact of Amazon returns on total inventory.
- Compared sellable and unsellable stock.
- Examined the difference between confirmed and reversed PO quantities.
- Products with low sales and high stock may remain in inventory longer.
- High-selling products may require additional stock.
- Returned products can increase available inventory after quality checks.
- Monitoring purchase orders can help plan future stock requirements.
- Monitor inventory and sales regularly.
- Plan stock based on product sales performance.
- Check returned products before adding them to sellable stock.
- Review and reduce unsellable inventory.
- Track confirmed, reversed, and open purchase orders.
- Avoid unnecessary purchases when sufficient stock is available.
- Website Marketing: Increase marketing activities on the own website to improve sales.
- Inventory Planning: Maintain production stock at twice the previous month's sales quantity.
- Stock Optimization: Plan inventory based on monthly sales to avoid overstocking.
- Sales Improvement: Focus on increasing own website sales for better inventory movement.

Conclusion

This project analyses inventory, sales, Amazon returns, and purchase orders using Microsoft Excel and Power BI.

Excel Pivot Tables were used to summarize and compare the data, and Power BI was used to create visualizations.

Overall, the analysis helps understand stock availability, sales performance, and purchase order status, supporting better inventory management and business decisions.
